

# How to Install Image Where

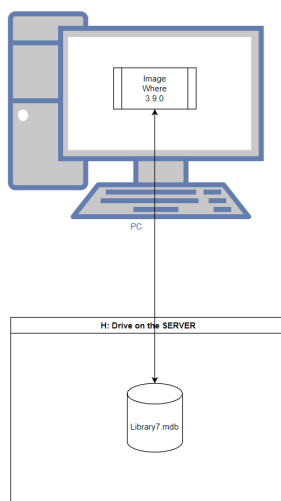

## Overview

Image Where runs according to the diagram below.

A user invokes the 'Image Where' executable from a UNC or mapped drive path to the server. In this way, Image Where will use the Database, Reports and certain Image folders on the Server.

However, as of version 3.9, the 'Image Where' executable can also be installed on the PC itself. When this happens, the user will be asked to identify the Server's top level 'Image Where' folder when first starting 'Image Where'. This will then be remembered in an 'IW.ini' file on the PC from that point onwards.

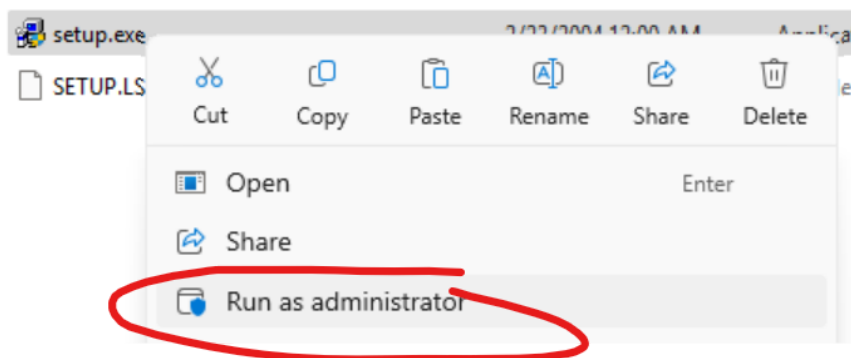

In both cases however, a number of files necessary to run Image Where need to be installed on the PC. This is achieved by running the setup.exe file in the Installation folder on the server under the appropriate version folder.

The setup.exe installation program for 3.9 will reside in the Install folder on the server under 'Image Where'. This should be run on the PC that requires an installation - the setup.exe can be run across the network by double-clicking on the mapped drive ('H' normally) on the PC.

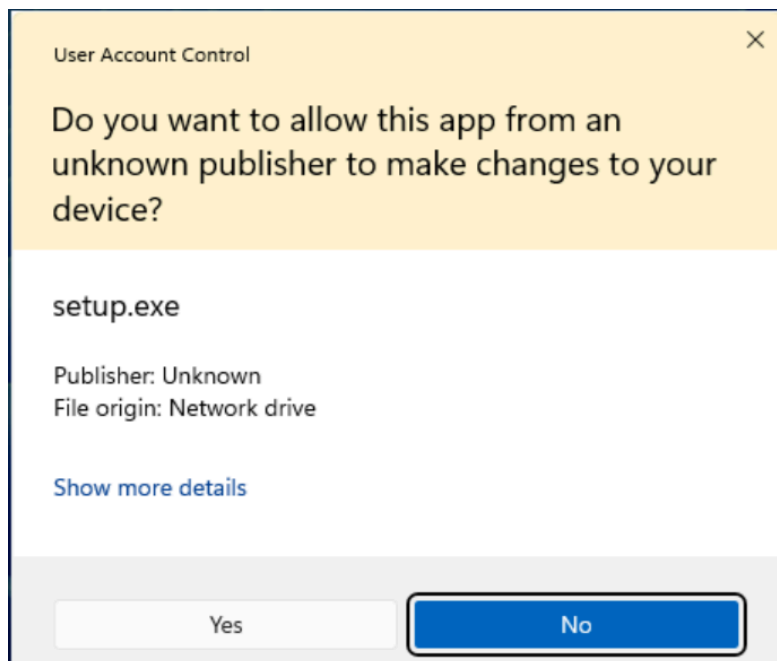

**Note:** setup.exe must not be run on the server itself as this may overwrite or register incompatible versions of system software critical to the running of the server.

## How to run setup.exe.

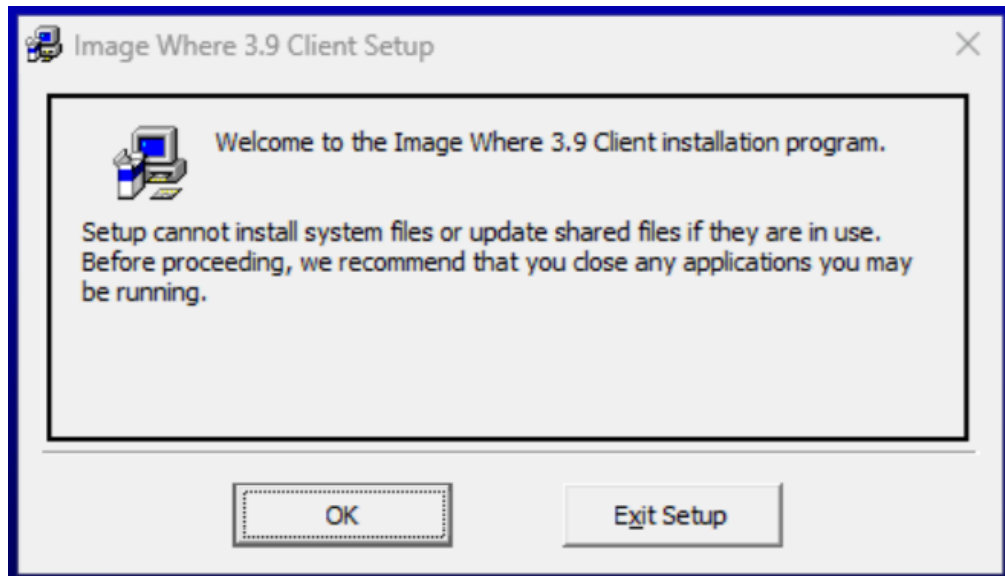

1. Run as Administrator.

And click on Yes when asked.

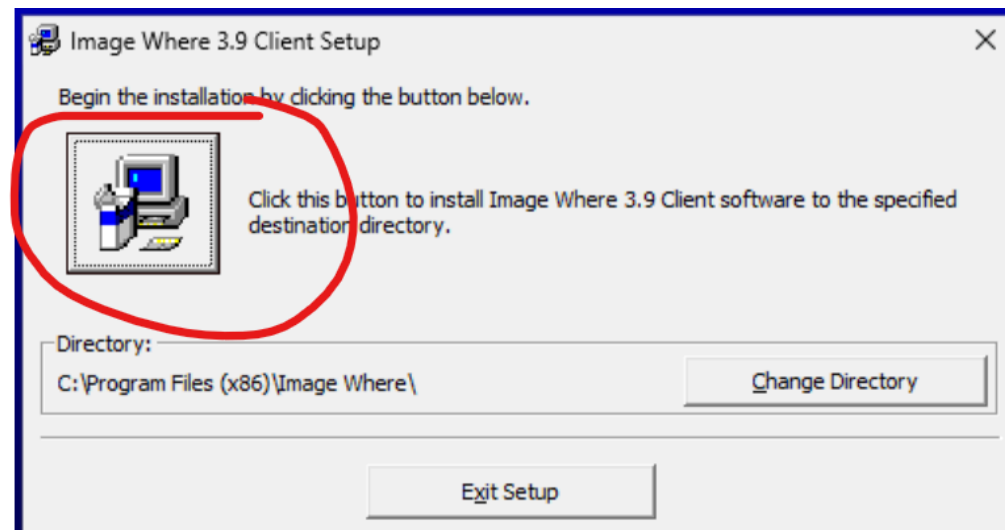

2. You will see the following welcome screen:

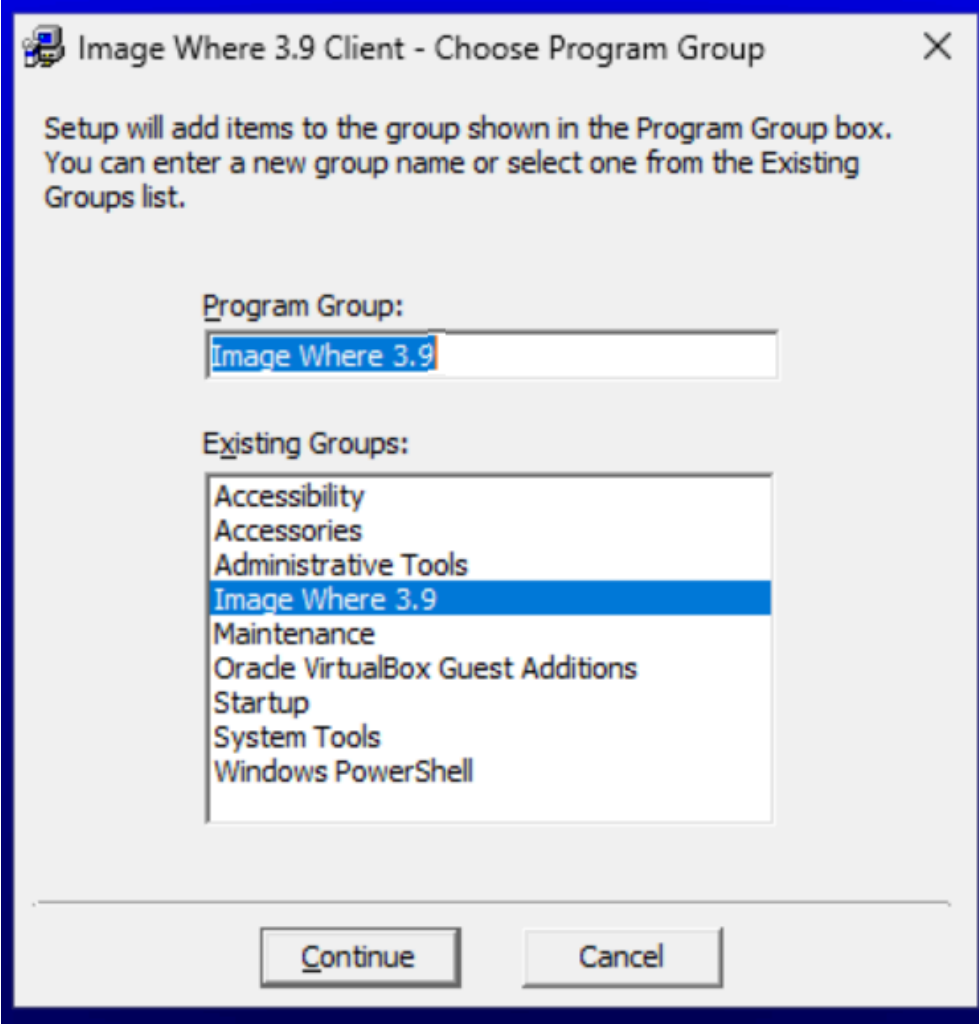

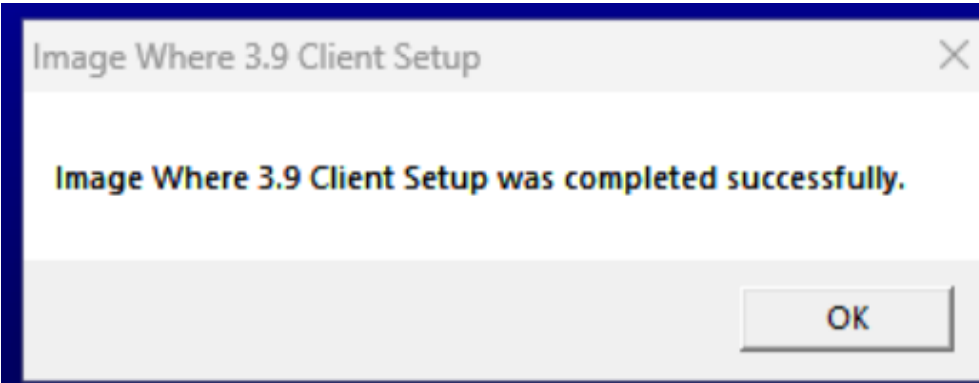

Click on Ok.

3. You will then see the following screen - click on the Large Icon Button defaulting the installation directory.

4. Click on 'continue' on the next screen defaulting 'Program Group' to Image Where 3.9

	 <p>Image Where 3.9 Client - Choose Program Group</p> <p>Setup will add items to the group shown in the Program Group box. You can enter a new group name or select one from the Existing Groups list.</p> <p>Program Group: Image Where 3.9</p> <p>Existing Groups: Accessibility Accessories Administrative Tools Image Where 3.9 Maintenance Oracle VirtualBox Guest Additions Startup System Tools Windows PowerShell</p> <p>Continue Cancel</p>
5.	<p>The files required to run 'Image Where' will then be installed to the installation folder and registered as applicable. Finally the following screen will be shown.</p>  <p>Image Where 3.9 Client Setup</p> <p><b>Image Where 3.9 Client Setup was completed successfully.</b></p> <p>OK</p> <p>Click on Ok.</p>

'Image Where 3.9' can now be run from Windows Start and a shortcut created on the desktop if required.
